

Dairyverse Products: Powering Healthier, More Productive Herds

Description

The success of any dairy farm depends on the health, fertility, and productivity of its cows. At Dairyverse, we understand the everyday challenges farmers face—milk fever, low yields, poor fertility, and disease outbreaks—and we provide **science-backed solutions tailored to Kenya's dairy realities.**

Our product line includes:

- **Restore+®** — A mineral-rich supplement that boosts immunity, improves calcium absorption, and reduces risks of milk fever, mastitis, and weak calvings.
- **Booster+®** — A high-energy supplement that increases appetite, supports higher milk yields, and restores body condition during early lactation.
- **Fertility+®** — Packed with essential vitamins and trace elements to strengthen reproductive health, reduce retained placenta, and enhance conception rates.
- **Tranzpro®** — A transition-period support formula that smooths calving, prevents metabolic disorders, and ensures healthier fresh cows.
- **MimbaCheck®** — A simple, reliable pregnancy test kit for cows, goats, and sheep—helping farmers confirm early and plan breeding effectively.

Every Dairyverse product is designed with one goal in mind: **to help farmers get more from every cow, every season.** By combining proper nutrition, health monitoring, and farmer-friendly innovations, Dairyverse is turning challenges into opportunities—ensuring happier cows, healthier herds, and profitable farms.
