

Key factors to consider in young heifer management

Description

Ensure that your calves get enough colostrum and [milk](#) at their early stages (1 - 3 months of age).

• Introduce concentrates as early as from 2 weeks of age (Starter pellets).

• Introduce mineral licks early enough

• Feed her Right;- Enough and properly cured fodder that is rich in major nutrients.

• Manage post weaning stress effectively.

Provide high quality supplements that mimic and have same quality as milk in order to enhance her growth;

Ndamaplus® is your perfect companion in this endeavour!
