Booster+® | Premium High Energy Supplement for dairy cows

Description

Don't Let Your Profits Shrink: Save Your Herd and Boost Yields with Booster+®

Booster+® is an advanced high-protein, energy, and trace element supplement designed to stop weight loss, trigger strong heat signs, and maximize your daily milk production.

Whether you are practicing intensive zero-grazing in Kiambu or managing a herd in Mbarara, every dairy farmer faces the same silent thief: **Negative Energy Balance**. When a high-producing cow gives more milk than the energy she gets from Napier grass or Maize Stover, she enters a "Razor Back" state. She literally burns her own body fat to keep milking, which leads to weight loss, shrinking daily yields, and silent heat.

The Feeding Challenge

A cow producing 20+ liters burns energy faster than she can absorb it from dry, fibrous grass. Standard dairy meal simply fails to bridge this gap, leaving your best cows undernourished and underperforming.

Enter Booster+®: The Proven High-Energy Dairy Supplement

Powered by our proprietary RestoreX® Technology, **Booster+®** is a powerful 4-in-1 complex that ensures your cow never has to "eat herself" to produce milk.

What RestoreX Technology Does for Your Herd:

Delivers a Massive Energy Boost: Your cow gets a direct, highly concentrated injection of calories right where she needs it. This stops weight loss and provides the fuel to maximize milk production without upsetting her stomach.

â?? Squeezes More Value Out of Dry Feed: Turn cheap, dry feeds into high-quality milk. RestoreX[®] supercharges the good bacteria in your cow's gut, helping her break down tough, fibrous materials like Maize Stover so she unlocks the absolute most nutrition out of every bite.

â?? Restarts the Reproductive System: Get your cow back in calf faster. Our carefully balanced trace elements are specifically designed to fix silent heat, trigger strong heat signs, and improve your overall conception rates.

Proven Results You Can See and Measure

â?? Restoration: Watch the ribs and backbone fill out in just 36 days.

â?? Yield: Expect a daily milk increase of 5 to 10 Litres per cow.

â?? Safety: 100% safe with a Zero milk withdrawal period.

Simple, Effective Application

We have simplified herd health into one easy-to-use routine. No special equipment is required.

â?? The Restoration Phase (For Thin Cows): Mix 50 grams of Booster+[®] thoroughly into the cow's morning feed every day for 36 days to eliminate the â??razor backâ? and restore her body condition.

â?? The Maintenance Phase (For Healthy Cows): To sustain high yields and keep a healthy cow in peak condition, continue mixing 50 grams per day into her regular dairy meal.

Note: Avoid mixing with other complex chemical drenching products to ensure she absorbs all the nutrients.

Trust the Source

Booster+[®] is manufactured by **Dairyverse Agritech Ltd**. We are not just sellers; we are dairy consultants deeply embedded in the industry. We understand the biology of the cow and the economics of the farmer.

Don't settle for thin cows and shrinking milk checks. Bridge the energy gap with RestoreX Technology today.

Frequently Asked Questions about Booster+[®]

Q: How soon will I see changes in my cow's body condition?

A: **Booster+[®]** is fast-acting. If you follow the Restoration Protocol (50g mixed in feed every morning), you will see the ribs filling out and the â??razor backâ? or â??Hyena Diseaseâ? disappearing within 36 days. Consistency is key ensure she gets it every single day.

Q: Is Booster+Â® safe for lactating cows? Will I have to throw milk away?

A: It is 100% safe for milking cows and has a zero milk withdrawal period. You can feed her the supplement in the morning and safely sell or consume her milk the exact same evening.

Q: Will this help if my cow is not showing heat signs (Silent Heat)?

A: Yes. Silent heat is almost always caused by low energy levels; the cow's body shuts down reproduction to save energy for survival. By bridging that energy gap, **Booster+Â®** restarts the reproductive system, leading to stronger, clearer heat signs and better conception rates.

Q: Can I use Booster+Â® if I am feeding poor-quality dry grass or Maize Stover?

A: Absolutely. In fact, this is exactly what it was designed for. **RestoreXÂ® Technology** helps your cow break down tough, dry, fibrous materials much more effectively, meaning she gets more energy out of the feed you already have.

Q: Where is Booster+Â® manufactured?

A: You are buying local quality with international standards. **Booster+Â®** is proudly manufactured by **Dairyverse Agritech Ltd**, ensuring the formula is tailored specifically to solve the nutritional challenges of East African livestock.
