NyamaPlus® Beef Fattening Concentrate - High Protein Finisher

Description

Maximize Weight. Minimize Time. Finish Bulls in 60 Days with NyamaPlus®

In the competitive world of beef farming, time is your most valuable currency. Keeping a bull on the farm for months without significant weight gain destroys your profit margins. Every extra day means paying for more maintenance feed, water, and labor.

NyamaPlus® is the ultimate beef fattening concentrate designed to condense your finishing cycle. Instead of grazing a bull for 6 months for minimal gains, our formula packs maximum weight onto the frame in just two months, allowing you to sell faster, reinvest your capital, and restock sooner.

Enter NyamaPlus®: The Proven 60-Day Finisher

Powered by our proprietary **RestoreX® Technology**, **NyamaPlus®** is a hyper-concentrated blend of high protein, energy, and trace elements. It is engineered to ensure your bull extracts the absolute maximum meat potential from every single kilo of grass, silage, or hay it consumes.

What RestoreX Technology Does for Your Bulls:

Supercharges Weight Gain: Stop wasting feed on cattle that refuse to grow. NyamaPlus® stimulates aggressive digestion, turning cheap forage directly into rapid, heavy muscle mass.

Premium Carcass Quality: It isn't just about weight; it's about the grade of the meat. Our targeted trace elements improve fat cover and marbling, ensuring your beef is tender, high-quality, and fetches top-tier prices at the butchery.

Unbeatable Appetite Stimulant: Heat stress, travel, and environmental changes can kill a bull's appetite. Nyamaplus® contains proprietary components that keep your bulls eating aggressively, day in and day out.

The 60-Day Bull Finisher Protocol

To achieve explosive weight gain, strict adherence to the dosage is critical. This is a potent, hyper-concentrated formula a micro-dose is all that is required.

Daily Dosage: Feed exactly 35g (1½ Tablespoons) per head, per day.

Mixing Method: Thoroughly mix the 35g dose into the bull's daily ration (bran, silage, or chopped nappier). For large herds, mix evenly so every bull gets its exact share.

The Cycle: Commit to an uninterrupted 60-Day finishing cycle before taking the bull to market.

Pro Tip: A bull cannot gain weight if it is full of parasites. Deworm all cattle 48 hours before starting the 60-Day Protocol, and ensure they have unlimited access to clean, fresh water to process the rapid muscle growth.

Pack Sizes & The Beef Finishing Bundle

Standard Pack (1.05kg): Lasts exactly 30 days for one bull.

The Beef Finishing Bundle (2x Standard Packs): This bundle provides the exact 60-day supply required to take one bull from the start of the protocol straight to the slaughterhouse.

Minipack: Available for shorter finishing adjustments.

Trust the Source

Nyamaplus® is manufactured by Dairyverse Agritech Ltd. We provide science-based animal nutrition you can trust, engineered to maximize the profitability of East African feedlots and commercial ranches.

Frequently Asked Questions about Nyamaplus®

Q: How much Nyamaplus® do I need to feed per day?

A: You only need to feed 35g (1½ Tablespoons) per bull, per day. Because the RestoreX Technology is hyper-concentrated, this small daily dose yields massive, rapid results. Do not overfeed.

Q: How long is the fattening cycle?

A: The formula is strictly designed for a 60-day finishing cycle. This two-month timeline is the "sweet spot" for maximizing heavy weight gain without wasting money on diminishing returns.

Q: Does it affect the quality of the meat?

A: Yes, in the best way possible. The high energy and protein blend specifically targets marbling and fat cover. This results in premium, tender beef that allows you to negotiate much better prices with buyers.

Q: Can I give this to my dairy cows to make them gain weight?

A: No. This formula is exclusively optimized for beef weight gain and carcass quality. If you have a thin dairy cow, you must use our Booster+[®] supplement, which is designed to add body condition while still supporting milk production.
